Resume Analyzer

Candidate Fit Score

5/10

Ratings & Feedback

■ Structure & Formatting - 6/10

The structure of the resume is somewhat confusing. The order of sections is not standard, with the summary appearing before the personal information and education. The projects, experience, and skills are all bulked together making it difficult to differentiate.

■ Content Quality - 6/10

The content is informative but lacking specifics. For instance, indicating what role they played in their projects and specific outcomes of their work could improve the quality.

■ Keywords & ATS Optimization - 8/10

The resume includes some good keywords such as React.JS, Node.JS, MongoDB that are relevant to a Python developer role. However, there is a lack of Python-related keywords, frameworks or libraries, except for Django.

■ Impact & Accomplishments - 4/10

Though the candidate has shared the projects they worked on, there is no mention of any specific accomplishments or quantifiable impact of their work.

■ Personal Branding - 7/10

The candidate makes a good effort in presenting their Github and LinkedIn profiles – a good step in personal branding. More efforts in highlighting personal brands, such as certifications, online courses, or community involvement would be beneficial.

■ Relevance to Job Role - 4/10

While some of the skills listed are relevant for a Python developer role, the overall content does not strongly align with the Python developer role. For instance, most projects focus heavily on front-end technologies rather than Python.

■ Grammar & Language - 6/10

The resume uses clear language, but there are instances of incorrect verb tenses and missing information that should be addressed.

Strengths & Weaknesses

Strengths:

Has a good amount of practical experience as indicated by the projects.

Strong personal branding initiative with links to Github and LinkedIn.

Weaknesses:

Lack of detailed information about the role played in projects.

Showcases mostly Front-end skills while applying for Python Developer role.

No specific accomplishments or results quantified.

Grammar and tense issues in few places.

Final Assessment

Considering the requirement of Python Programming knowledge for the role applied, candidate fit score can be considered as 5/10 considering all the factors including projects and skills.

SUMMARY

A dedicated web developer with a B.Sc in Information Technology. Skilled in creating user-centric web applications with experience in front-end and back-end development. Proficient in languages like HTML, JavaScript, and Python.

EDUCATION

Bachelor of Science in Information Technology- Annasaheb Vartak College of Arts, Science and Commerce (GPA: 6.92)

TECHNICAL SKILLS

Frontend Technologies: HTML, CSS, JavaScript, React.JS, Bootstrap

Backend Technologies: Node.JS, Express.JS, MongoDB, Python-Django

PROJECTS

1. SnapGram (Social Media Platform) using Python-Django, DJongo, Argon2 and other Python packages for effective backend operations.
2. Javascript Music Player: Built using HTML, CSS, JavaScript, and Python-Django, it offers comprehensive music management and playback.
3. Linkup (Portfolio Website): A platform showcasing user skills, projects, and experiences with user and admin login capabilities.

ACHIEVEMENTS

Collaborated in a team to build SnapGram and Music Player, contributing mainly on the backend using Django.

Developed and maintained the portfolio website, Linkup.

Note: More interested in taking up projects that stress on Python programming.
